

SmartHealth Booking FAQ

Who can book

Patients register with name, email, and password. Public registration creates a patient account only. Providers are created by front desk staff. You must log in to book. The appointment time must be in the future. You choose a provider; you do not send someone else's patient id.

What happens when I book

The slot is reserved for that provider at that date and time. The visit starts as pending. A short hold timer starts. A provider or front desk should confirm the visit. If nobody confirms before the hold expires, the booking is canceled automatically and the slot is released.

What does confirmed mean

Confirmed means a clinician or front desk accepted the visit and the hold timer stopped. The slot stays blocked so nobody else can take it. You will see status confirmed, not pending. You can still complete, cancel, or reschedule after confirm.

Complete and cancel

Complete means the visit happened. Cancel means the visit will not happen. Only the assigned provider or front desk can confirm, complete, or cancel through the booking workflow. Patients cannot complete their own appointment. Canceled and completed slots can be booked by someone else at that same time.

Reschedule

Patients, the assigned provider, or front desk can reschedule a pending or confirmed visit to a new future time. The new slot must be free for that provider. You cannot reschedule a completed or canceled visit. If the new time is taken you will see a conflict and must pick another time.

Notifications

You receive in-app notifications when a visit is booked, confirmed, rescheduled, canceled, or completed. Check Notifications after you book. These are product notifications, not SMS or email in this version.

Why was my booking refused

Past times are rejected. If that provider already has an active visit at that minute, the slot is taken. If scheduling is temporarily down, the booking is not kept. Try again or pick another time. Inactive accounts cannot log in.

Privacy

Do not share your password. Front desk can list patients and analytics. Patients only see their own appointments and notifications. This FAQ does not contain other patients' names or medical records.
